Installation

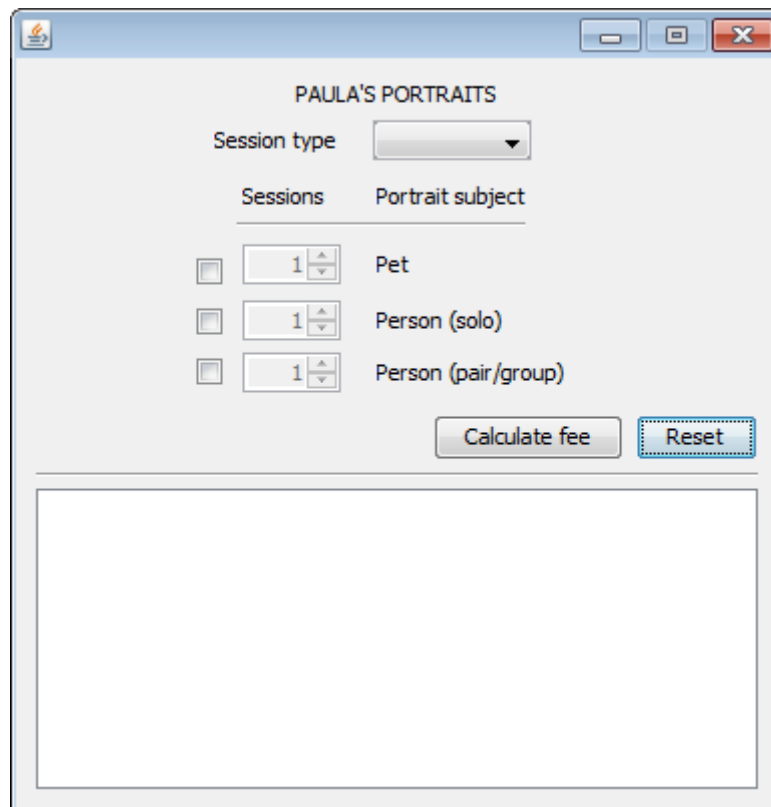

The executable JAR file must run like a typical Window application. Java Runtime Environment (JRE) is required to run the application and must be properly configured.

To install and run the executable JAR file

1. If JRE is not yet installed in to your computer, proceed to http://www.java.com/en/download/windows_xpi.jsp for installation. Otherwise, proceed to the next step.
2. Download **Paula's Portraits.jar** file.
3. Put the file into the desired folder or location.
4. Open the executable file.

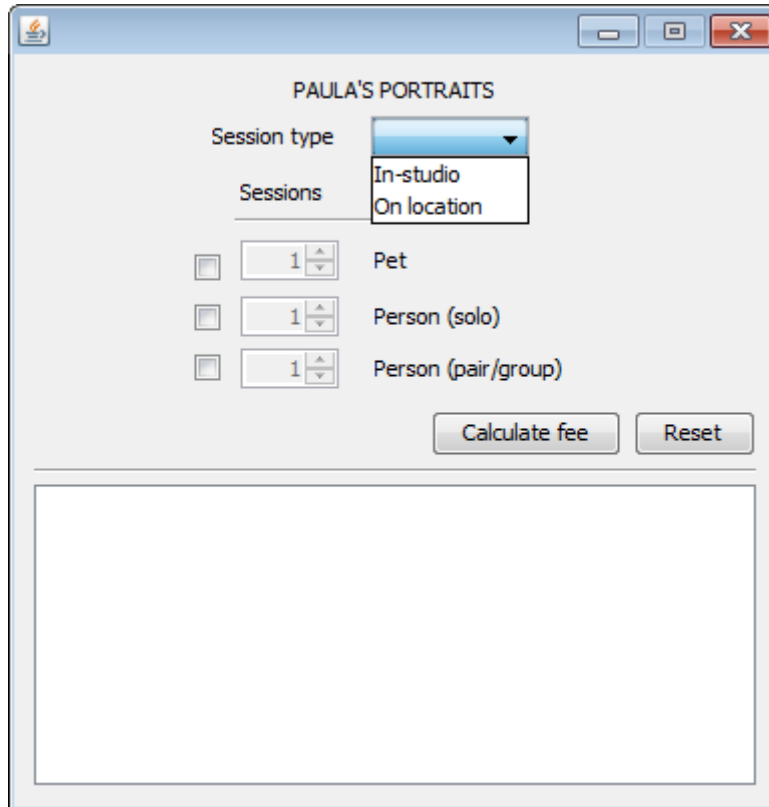

5. The following screen will appear.

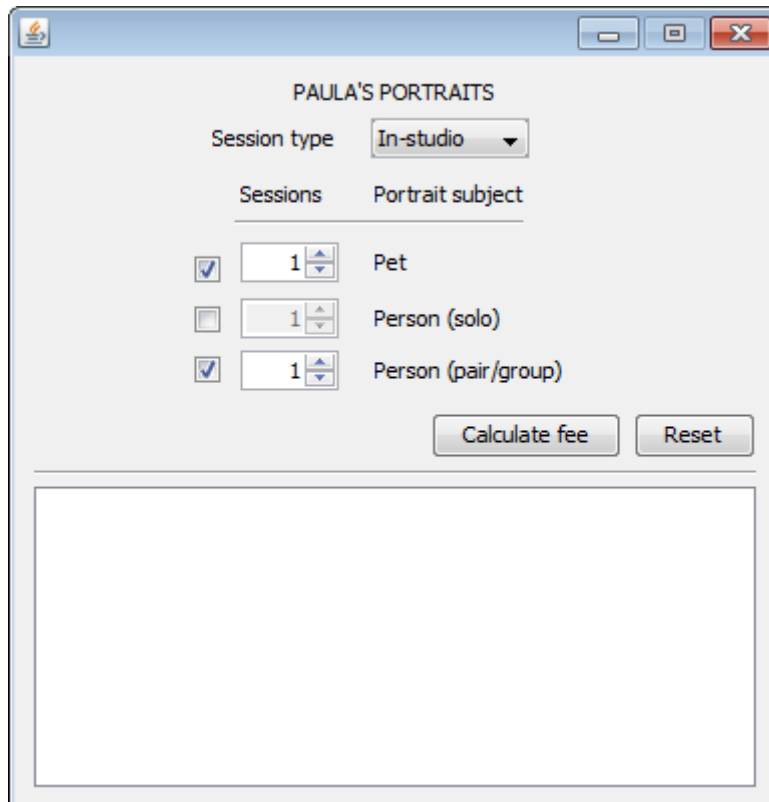

Calculating portrait fees

1. Select a session type. Session type comes up in two choices: in-studio and on location.

The screenshot shows a window titled "PAULA'S PORTRAITS". At the top, there is a "Session type" dropdown menu with a blue arrow pointing down. The dropdown is open, showing two options: "In-studio" and "On location". Below the dropdown is a "Sessions" label. Underneath, there are three rows of controls: a checkbox, a spinner box with the number "1", and a text label. The first row is for "Pet", the second for "Person (solo)", and the third for "Person (pair/group)". All three checkboxes are currently unchecked. At the bottom right of the form area, there are two buttons: "Calculate fee" and "Reset". Below the form area is a large empty rectangular box.

2. Select necessary portrait subject, by ticking the checkbox component. At least one of the three portrait subjects is required to perform the calculation.

This screenshot shows the same "PAULA'S PORTRAITS" window. The "Session type" dropdown is now set to "In-studio". The "Sessions" label is followed by a "Portrait subject" label. The three rows of controls are the same, but now the checkboxes for "Pet" and "Person (pair/group)" are checked, while the checkbox for "Person (solo)" remains unchecked. The "Calculate fee" and "Reset" buttons are still present at the bottom right, and the large empty box is at the bottom.

3. Enter or choose number of sessions by using the spinner component, right next to the checkbox. The required minimum number of sessions is 1, while the maximum is 20.

The screenshot shows a window titled "PAULA'S PORTRAITS". At the top, there is a "Session type" dropdown menu set to "In-studio". Below this, there are two columns: "Sessions" and "Portrait subject". Under "Sessions", there are three rows, each with a checkbox, a spinner box, and a label. The first row has a checked checkbox, a spinner box with the value "4", and the label "Pet". The second row has an unchecked checkbox, a spinner box with the value "1", and the label "Person (solo)". The third row has a checked checkbox, a spinner box with the value "15", and the label "Person (pair/group)". At the bottom right of the form area, there are two buttons: "Calculate fee" and "Reset". Below the form area is a large empty rectangular box.

4. Click "Calculate fee" to display breakdown of fees and the total calculation.

The screenshot shows the same "PAULA'S PORTRAITS" window, but now the "Calculate fee" button is highlighted with a dashed border. Below the form area, a text box displays the following fee breakdown:

SESSION FEE	
In-studio	\$ 0.00
PORTRAIT FEE(S)	
4 - Pet @ \$ 95.00	\$ 380.00
15 - Person (pair/group) @ \$ 75.00	\$ 1,125.00
	=====
TOTAL FEE	\$ 1,505.00

5. Click “Reset” button to set up new portrait calculations. All components must be reset back to their initial state.

The screenshot shows a software window titled "PAULA'S PORTRAITS". At the top, there is a "Session type" dropdown menu. Below this, the window is divided into two columns: "Sessions" and "Portrait subject". Under "Sessions", there are three rows, each with a checkbox, a numeric spinner set to "1", and a label: "Pet", "Person (solo)", and "Person (pair/group)". At the bottom right of the configuration area, there are two buttons: "Calculate fee" and "Reset". The "Reset" button has a dashed border. Below the configuration area is a large, empty rectangular box.
